

## Wired.

**Proven auto-tie technology  
outputs tighter bales, faster.**

When it comes to premium baling technology, after the bale build phase nothing matters more than a properly tied bale. Our approach to automated baling is based on over 60 years of continuous improvement. The Balemaster auto-tie technology is a combination of proven electro/mechanical concepts, operator-tested automation and built-to-last construction and design engineering principles. So, until we invent wireless baling, there's nothing easier, nothing more reliable and nothing faster than Balemaster's Auto-Tier.

## Acme Corrugated Box Co. Installs Amtech's Retrieve2.0

Hatboro, Pennsylvania based Acme Corrugated Box Company has purchased and installed Retrieve2.0, Amtech's 2nd generation document management solution.

Retrieve2.0 helped reduce Acme's Sales and Customer Service teams' dependence on the Accounting Department to pull needed documents. "I really do love this system," said Acme's Controller, Jennie Becker. "Getting documents stored in Retrieve and bringing them back up is fast and easy. You can search for an invoice and the corresponding delivery receipt and e-mail to your customer in seconds."

Seamlessly integrated with the Imaginera ERP accounting and manufacturing applications, Retrieve2.0 is said to enable box plants to archive, process, retrieve and research document transactions without leaving the workstation. The software electronically captures documents, and automates the distribution of all printed documents, reports and forms, according to Amtech.

## Vox Packaging Installs New Signature Premiere 110 FFG

Vox Packaging has purchased and installed a new Signature Premier 110 folder gluer at its Denison, Texas, facility to further enhance its capabilities and complete more jobs in less time, according to Kevin Koplun, Sales Manager for AIM and Signature folder gluers.

Your plant's future is bright with

**RSM1000**<sup>™</sup>

In the first days of running our liquid rheology modifier you will see

- reduced starch consumption
- lower solids
- lower board issues
- increased run speeds

This is immediate savings!
