

## Acme Corrugated Saluted For Safety

Burton R. Cohen, President of Acme Corrugated Box Co., Inc., reported that Acme has been awarded the coveted 2011 Affinity Gold Award from Affinity Insurance, LTD. This award is given out each year to member companies that demonstrate the highest level of safety and claims management among the membership.

Five years ago Acme became a member of the Affinity insurance captive and joined nearly 300 other members from a variety of manufacturing industries with the goal of controlling insurance costs and improving risk management through rigorous loss control.

Aaron Troutman, Vice President-Risk Control at Captive Resources, LLC (Affinity Risk Control consultant) said, "Years ago the leadership of Affinity recognized the value of acknowledging excellence when it comes to safety and

claims management. Therefore, the Affinity Risk Control awards program is symbolic of its appreciation to member companies who have earned a good safety record and achieved established risk management goals. The Risk Control Report Card Score is the comprehensive tool used to measure this success, including participation at board meetings, attendance at risk control workshops, involvement with claim reviews, achievement with Risk Control Assessment scores, and maintaining low loss ratios over multiple years.

"It is with great pleasure that we honor Acme Corrugated Box Company, Inc. as a 2011 Gold Award winner for risk control performance. This noteworthy award recognizes your safety excellence and ranking among the top 1 percent of all Affinity members for risk control score. Congratulations to the entire team of employees, supervisors, and management at Acme, and continue to engage in your continuous improvement efforts."

Cohen thanked the members of Affinity and the staff of Captive Resources for their gesture and particularly saluted Acme's CFO David Platt, HR Manager, Heidi Morrison, and all the members of Acme's staff who have been so thoroughly vested in risk control at Acme. Cohen says that this award "symbolizes the great strides the company has made. We are quite proud to accept this award as recognition of the hard work done to successfully meet our safety goals."

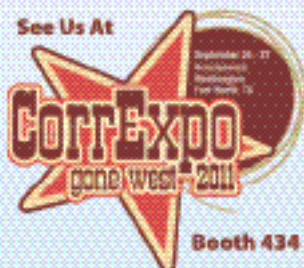

## Board Dust Problems?

Board dust accumulation can destroy the efficiency and effectiveness of infrared drying and ultraviolet curing systems.

Not with PRI Technologies systems. We design our Zone® ultraviolet curing systems and Quik Dry® infrared drying systems to prevent board dust contamination through a unique patented air management system. Reflectors and bulbs stay clean allowing higher efficiencies, longer bulb life and safer operations. That means less electrical consumption and faster production speeds. Doing anything less is playing with fire.

When you're ready to add quality  
ultraviolet curing and infrared drying  
to your operation...
