BOBST 820

Acme's Newest High-Speed Production Line

In Spring of 2016, Acme Corrugated unveiled its newest production line, a **BOBST 820 Flexo Folder Gluer (FFG)**. Capable of producing top quality at top speeds, this machine is the perfect complement to Acme's existing array of high-speed converting lines.

At 24,000 boxes per hour, the **BOBST 820** is the fastest FFG on the market today. Acme's installation is the *tenth* such machine in the world, and only the *second* manufactured in a "mirrored" configuration. By reversing the machine's orientation, it faces another production line. Certain common functions can be shared between machines, further improving production efficiencies.

The **BOBST 820** is designed to produce accurate, consistent boxes, ideal for use with automated packing equipment such as case erectors. From small to mid size boxes, the **BOBST 820** is the ideal choice to manufacture boxes for pharmaceuticals, personal care products, consumer goods, sportswear, and much more.

BOBST is a leading innovator in corrugated converting equipment. Acme's latest addition demonstrates our commitment to maintaining cutting edge capabilities in the competitive corrugated market, replacing older, less precise production lines. Acme's Hatboro, Pennsylvania facility is among the best equipped on the East Coast. *Plant tours can be scheduled, upon request.*

BOBST 820 Key Features:

- ◆ 4-color printing (top printer)
- ◆ Basic inline die cutting (hand holes, vent holes)
- ◆ One button setup (prefeeder, flexo, stacker)
- ◆ 2-minute changeover from one job to the next
- ◆ Super fast setup: Next job can begin setup while current order is still running
