

ACME CORRUGATED'S INNOVATIVE SOLUTION

# MOISTURE RESISTANT CORRUGATED PACKAGING

WITHOUT WAX COATING

Dairy Products

Meats & Seafood

Produce

Car Parts & Electronics

Floral & Nursery

Developed to  
be 100% FDA  
approved for direct  
food contact

## ADVANTAGES:

- High level of moisture resistance inside of box
- Feels and behaves like typical high-quality packaging materials on the outside
- FDA approved for direct food contact. Meats, cheese, butter, and other fatty foods will not stick to or stain the coated surface.
- Can be substituted for wax coated materials in many cases; significant cost savings possible.
- Fully recyclable, just like conventional corrugated materials, in normal waste stream
- Available with Kraft or White outside liner

## AcmeGUARD PACKAGING SOLUTIONS FOR:

- Fresh and frozen produce
- Wet bottles and cans
- Fresh and frozen meats, poultry, and seafood
- Dairy products
- Car parts and electronic components
- Floral and nursery items
- Products prone to mold and mildew
- Fine coated items with sensitive surfaces

Water resistant materials have been in demand for years. Post-production coatings have been the standard until now.

## AcmeGUARD is the answer you have been asking for.

This leading-edge material provides you with an alternative that delivers a high level of moisture resistance for your packaging needs. Pack fruit and vegetables while wet, raw or frozen meat, and wet bottles and cans without concern for harming the box. In addition, the versatile AcmeGUARD coating provides an anti-scuff surface when packing high-quality finishes that need an extra level of protection during shipping and handling.

### AcmeGUARD coated surfaces are 100% FDA approved for direct food contact.

Acme's commitment to environmental sustainability makes AcmeGUARD the responsible choice as a fully recyclable corrugated product. Simply process with your normal corrugated waste.

AcmeGUARD materials protect the contents inside the box. On the outside, cartons look and feel like conventional boxes and can be handled and processed the same way. Printed content looks the same. Tape and labels will stick to the outside without issue.
